Starion's instruments employ focused heat and pressure to simultaneously seal and divide tissue, minimizing thermal damage to surrounding tissue. Because of our technology, Starion products provide the following benefits to surgeons and clinical staff.

- **Safety** – Starion's equipment can be used near delicate tissue
- **Ease of Use** – Starion's devices are intuitive and simple, surgeons quickly become proficient
- **Versatility** – Starion's innovative design enables surgeons to use our device as graspers, dissectors and to seal and divide
- **Comfort** – Our ergonomic handle designs and intuitive finger or foot switch ensures control and precision
- **Expedited Procedures** – With only two components to set-up and clean up Starion's instruments save valuable operating room and procedure time
- **Constant Visibility** – Starion's products minimize smoke, mitigating the potential for visibility errors
- **Patient Outcomes** – Less unintended thermal spread can result in improved patient outcomes

Dual Control Footswitch provides variable and high power for Starion Cautery instruments. Used with the Starion UPS, the Footswitch is ergonomically designed and emits an audible low tone for variable power and a high pitch tone when high power is delivered.

Universal Power Supply converts AC power from a hospital-grade wall outlet into low voltage DC power required by all Starion's instruments. The Starion UPS is compatible with voltages worldwide. In addition, the UPS is a compact, 3-lb unit that can be suspended from an I.V. pole or placed on any flat surface, making the Starion UPS portable and easy to store.
